ABSTRACT

A pusher assembly for use in a contact block assembly is disclosed. The pusher assembly comprises a pusher (105); a window (214) extending through the pusher; a first movable contact (106) positioned within the window; and a second movable contact (107) positioned adjacent to said first movable contact within the window. A method of assembling a pusher assembly having a movable contact is also disclosed. The method comprises steps of inserting a first movable contact within a pusher; inserting a second movable contact with the pusher; and retaining the first movable contact and the second movable contact within the pusher by a spring.
